Assignment 1

Graph of function f(x) over the interval [a, b].

The graph shows a typical scenario where the function's behavior changes over the interval. It also highlights the important points where the function reaches critical values, such as maxima and minima. The data points indicate the function's values at specific intervals, allowing for a detailed analysis of its behavior. The graph is a useful tool for understanding the function's characteristics and predicting its future behavior.
