Unit 4 - Week 2

Assignment 2

Due on: 2020-02-15, 23:59 GMT

Assignment 2

Assignment 2 covers the topic of wave motion and its applications in various fields such as oceanography and engineering. Students are expected to demonstrate their understanding of wave properties, wave propagation, and wave behavior in different environments.

Assignment 2 has two main parts:

1. Theoretical Component
   - Questions on the properties of waves, wave propagation, and wave behavior in different environments.
   - Problem-solving questions related to wave motion and its applications.

2. Practical Component
   - Experimental tasks to measure wave properties and analyze wave behavior in different conditions.

The assignment is designed to reinforce the concepts learned in the course and to develop students' analytical and problem-solving skills.

Good luck with your assignments!
