Week 9 Assignment 9 Assignment 9

Due on 2016-10-06, 23:59 IST.

Question 1: What is the name of the method used to introduce an aggregation operator in a relational database? (2 marks)

Question 2: What is the name of the method used to define a trigger in a relational database? (2 marks)

Question 3: What is the name of the method used to create a stored procedure in a relational database? (2 marks)

Question 4: What is the name of the method used to alter a table in a relational database? (2 marks)

Question 5: What is the name of the method used to drop a table in a relational database? (2 marks)

Question 6: What is the name of the method used to insert a row into a table in a relational database? (2 marks)

Question 7: What is the name of the method used to update a row in a table in a relational database? (2 marks)

Question 8: What is the name of the method used to delete a row from a table in a relational database? (2 marks)

Question 9: What is the name of the method used to create a new database in a relational database system? (2 marks)

Question 10: What is the name of the method used to drop a database in a relational database system? (2 marks)

Question 11: What is the name of the method used to create a new user in a relational database system? (2 marks)

Question 12: What is the name of the method used to drop a user in a relational database system? (2 marks)

Question 13: What is the name of the method used to grant privileges to a user in a relational database system? (2 marks)

Question 14: What is the name of the method used to revoke privileges from a user in a relational database system? (2 marks)

Question 15: What is the name of the method used to create a new schema in a relational database system? (2 marks)

Question 16: What is the name of the method used to drop a schema in a relational database system? (2 marks)

Question 17: What is the name of the method used to create a new index in a relational database system? (2 marks)

Question 18: What is the name of the method used to drop an index in a relational database system? (2 marks)

Question 19: What is the name of the method used to create a new view in a relational database system? (2 marks)

Question 20: What is the name of the method used to drop a view in a relational database system? (2 marks)

Question 21: What is the name of the method used to create a new stored procedure in a relational database system? (2 marks)

Question 22: What is the name of the method used to drop a stored procedure in a relational database system? (2 marks)

Question 23: What is the name of the method used to create a new trigger in a relational database system? (2 marks)

Question 24: What is the name of the method used to drop a trigger in a relational database system? (2 marks)

Question 25: What is the name of the method used to create a new function in a relational database system? (2 marks)

Question 26: What is the name of the method used to drop a function in a relational database system? (2 marks)

Question 27: What is the name of the method used to create a new package in a relational database system? (2 marks)

Question 28: What is the name of the method used to drop a package in a relational database system? (2 marks)

Question 29: What is the name of the method used to create a new sequence in a relational database system? (2 marks)

Question 30: What is the name of the method used to drop a sequence in a relational database system? (2 marks)

Question 31: What is the name of the method used to create a new schema in a relational database system? (2 marks)

Question 32: What is the name of the method used to drop a schema in a relational database system? (2 marks)

Question 33: What is the name of the method used to create a new index in a relational database system? (2 marks)

Question 34: What is the name of the method used to drop an index in a relational database system? (2 marks)

Question 35: What is the name of the method used to create a new view in a relational database system? (2 marks)

Question 36: What is the name of the method used to drop a view in a relational database system? (2 marks)

Question 37: What is the name of the method used to create a new stored procedure in a relational database system? (2 marks)

Question 38: What is the name of the method used to drop a stored procedure in a relational database system? (2 marks)

Question 39: What is the name of the method used to create a new trigger in a relational database system? (2 marks)

Question 40: What is the name of the method used to drop a trigger in a relational database system? (2 marks)

Question 41: What is the name of the method used to create a new function in a relational database system? (2 marks)

Question 42: What is the name of the method used to drop a function in a relational database system? (2 marks)

Question 43: What is the name of the method used to create a new package in a relational database system? (2 marks)

Question 44: What is the name of the method used to drop a package in a relational database system? (2 marks)

Question 45: What is the name of the method used to create a new sequence in a relational database system? (2 marks)

Question 46: What is the name of the method used to drop a sequence in a relational database system? (2 marks)

Question 47: What is the name of the method used to create a new schema in a relational database system? (2 marks)

Question 48: What is the name of the method used to drop a schema in a relational database system? (2 marks)

Question 49: What is the name of the method used to create a new index in a relational database system? (2 marks)

Question 50: What is the name of the method used to drop an index in a relational database system? (2 marks)
