1. Which of these is the correct sequence of a silvicultural system? 1 point
   - Stand tending → Regeneration → Harvesting
   - Harvesting → Stand tending → Regeneration
   - Regeneration → Harvesting → Stand tending

   Yes, the answer is incorrect.

2. Tending is being done during 1 point
   - every stage of life
   - mid-life stage of the tree
   - late stage of the tree
   - any stage of life

   Yes, the answer is incorrect.

3. Which of these is not a feature of natural regeneration? 1 point
   - low cost
   - less requirement of heavy machinery and labour
   - presentation of genetic variability
   - good control over genetic improvement

   Yes, the answer is incorrect.

4. Transplant regeneration is 1 point
   - natural regeneration
   - artificial regeneration by planting nursery stock
   - artificial regeneration by using hybrid trees
   - artificial regeneration with cuttings and suckers

   Yes, the answer is incorrect.

5. The movement of seeds away from their place of seed production into a new area is called 1 point
   - translocation
   - migration
   - dispersal
   - shifting

   Yes, the answer is incorrect.

6. All the above is correct. Which of these methods of regeneration cannot be used? 1 point
   - natural regeneration
   - artificial regeneration by direct seeding
   - artificial regeneration by planting nursery stock
   - artificial regeneration by transplanting trees

   Yes, the answer is incorrect.

7. Ring看到 (Japanese for ring reading) is primarily a feature of 1 point
   - natural regeneration
   - artificial regeneration
   - assisted natural regeneration
   - assisted artificial regeneration

   Yes, the answer is incorrect.

8. Which of these is not a feature of natural regeneration? 1 point
   - least consumption of insects and weeds
   - little control over sapling and stand density
   - long-term trend to regenerate lower
   - high requirement of heavy machinery and labour

   Yes, the answer is incorrect.

9. Which of these is not a feature of clear-felling system? 1 point
   - simple system, easy and efficient operation
   - allows for establishment of a new forest crop
   - removes all vegetation and Laboratories in few areas
   - removes natural processes of fire and large-scale insect attacks

   Yes, the answer is incorrect.

10. Average age at which timber is considered safe for felling is called as 1 point
    - prime age
    - final age
    - rotation age
    - maturity age

    Yes, the answer is incorrect.
