Assignment 2

The answers to this assignment have been posted. Your peer reviews must now be submitted. This assignment is due on 2019-05-31, 23:59 IST.

1. The structure of the air is such that it is present at a rate of 40°C but only 3°C difference between the indoor and outdoor. At hot pump that requires a heat pump device to maintain the desired temperature in the room. This is used to maintain the humidity level in the room.

2. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

3. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

4. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

5. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

6. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

7. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

8. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

9. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

10. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

11. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

12. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

13. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

14. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

15. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

16. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

17. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

18. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

19. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

20. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

21. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

22. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

23. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

24. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

25. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

26. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

27. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

28. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

29. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

30. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

31. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

32. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

33. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

34. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

35. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

36. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

37. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

38. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

39. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

40. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.

41. The air-conditioning device is used to maintain the temperature in the room. This is used to maintain the humidity level in the room.
