Assignment 3

Due on: 23-03-2018, 23:59 IST

1. Which of the following costs is related to Non-Manufacturing Fixed Capital Investment? (1 mark)
   (a) labour
   (b) land
   (c) raw material
   (d) finance

2. A slump sale is a situation in which
   (a) the demand for the product is stagnant
   (b) the demand for the product is increasing
   (c) the demand for the product is decreasing
   (d) the demand for the product is seasonal

3. John, a manufacturer of metallurgical products, has the following data available:
   - Fixed cost: Rs 15,000
   - Variable cost per ton: Rs 50
   - Selling price per ton: Rs 100
   Calculate the break-even point in terms of the number of tons and the total revenue.

4. A metal manufacturing company produces a certain type of metal at a cost of Rs 50 per kg. The selling price is Rs 80 per kg. The company incurs a fixed cost of Rs 5,000 per month. Determine the break-even point in terms of monthly production and sales revenue.

5. A chemical plant produces a product whose annual production cost is Rs 55,000. The fixed cost is Rs 20,000 per annum and the variable cost is Rs 10 per unit. The selling price of the product is Rs 50 per unit. Calculate the break-even point in terms of the number of units produced per year.

6. A plant produces a product at a cost of Rs 30 per unit. The selling price is Rs 45 per unit. The fixed cost is Rs 5,000 per month. Determine the break-even point in terms of the number of units produced per month.

7. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

8. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

9. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

10. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

11. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

12. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

13. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

14. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

15. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

16. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

17. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

18. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

19. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

20. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

21. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

22. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

23. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

24. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

25. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

26. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

27. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

28. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

29. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.

30. A firm manufactures a product at a cost of Rs 20 per unit. The selling price is Rs 30 per unit. The fixed cost is Rs 10,000 per month. Determine the break-even point in terms of the number of units produced per month.
