Unit 12 - Week 10

Assignment 10

Due: 2020-04-10, 23:59:59

1. Alzheimer’s disease symptoms can be classified into which of the following aspects of brain tissue metabolism?
   - A) athletes
   - B) aggression
   - C) aggression
   - D) a combination of 1 and 2
   - 2 points

2. A computer scientist is testing the following equation: 1 + 1 = 2
   - A) It is correct.
   - B) It is incorrect.
   - 1 point

3. A study found that rats in an environment with more social interaction have a better survival rate.
   - True
   - False
   - 1 point

4. A computer scientist is trying to solve the following problem:
   - A) He needs to break the problem down into smaller tasks.
   - B) He needs to use a specific algorithm.
   - C) He needs to test the problem multiple times.
   - D) None of the above.
   - 1 point

5. A computer scientist has a 95% confidence level in his/her work on the following problem.
   - A) He/She will have a 95% chance of success.
   - B) He/She will have a 5% chance of failure.
   - C) He/She cannot fail.
   - D) None of the above.
   - 1 point

6. A computer scientist is testing the following equation: 1 + 1 = 3
   - A) It is correct.
   - B) It is incorrect.
   - 1 point

7. A computer scientist is testing the following equation: 1 + 1 = 2
   - A) It is correct.
   - B) It is incorrect.
   - 1 point

8. A computer scientist is trying to solve the following problem:
   - A) He needs to break the problem down into smaller tasks.
   - B) He needs to use a specific algorithm.
   - C) He needs to test the problem multiple times.
   - D) None of the above.
   - 1 point

9. A computer scientist has a 95% confidence level in his/her work on the following problem.
   - A) He/She will have a 95% chance of success.
   - B) He/She will have a 5% chance of failure.
   - C) He/She cannot fail.
   - D) None of the above.
   - 1 point

10. A computer scientist is testing the following equation: 1 + 1 = 3
    - A) It is correct.
    - B) It is incorrect.
    - 1 point

8. A computer scientist is trying to solve the following problem:
   - A) He needs to break the problem down into smaller tasks.
   - B) He needs to use a specific algorithm.
   - C) He needs to test the problem multiple times.
   - D) None of the above.
   - 1 point

9. A computer scientist has a 95% confidence level in his/her work on the following problem.
   - A) He/She will have a 95% chance of success.
   - B) He/She will have a 5% chance of failure.
   - C) He/She cannot fail.
   - D) None of the above.
   - 1 point

10. A computer scientist is testing the following equation: 1 + 1 = 3
    - A) It is correct.
    - B) It is incorrect.
    - 1 point
