Assignment 3

Due on 2021-05-15, 23:59 IST.

1. Choose the correct statement on covariational relationship:
   a) It is a cause-effect relationship.
   b) It is a response to a cause relationship.
   c) It is a relationship between the domain and boundary conditions.
   d) It is a relationship between the domain and boundary conditions.

2. The variable in a covariational relationship is:
   a) The independent variable.
   b) The dependent variable.
   c) The control variable.
   d) The experimental variable.

3. In a covariational relationship, the independent and dependent variables:
   a) Are always measured in the same units.
   b) Are always measured in different units.
   c) Can be measured in any units.
   d) Are always measured in the same units.

4. In a covariational relationship, the independent variable is:
   a) The variable that is being manipulated by the researcher.
   b) The variable that is being measured by the researcher.
   c) The variable that is affecting the dependent variable.
   d) The variable that is being controlled by the researcher.

5. Covariational relationships are often used to:
   a) Predict future events.
   b) Explain cause-effect relationships.
   c) Test hypotheses.
   d) Describe patterns in data.

6. Covariational relationships are often used to:
   a) Predict future events.
   b) Explain cause-effect relationships.
   c) Test hypotheses.
   d) Describe patterns in data.

7. Covariational relationships are often used to:
   a) Predict future events.
   b) Explain cause-effect relationships.
   c) Test hypotheses.
   d) Describe patterns in data.

8. Covariational relationships are often used to:
   a) Predict future events.
   b) Explain cause-effect relationships.
   c) Test hypotheses.
   d) Describe patterns in data.

9. Covariational relationships are often used to:
   a) Predict future events.
   b) Explain cause-effect relationships.
   c) Test hypotheses.
   d) Describe patterns in data.

10. Covariational relationships are often used to:
    a) Predict future events.
    b) Explain cause-effect relationships.
    c) Test hypotheses.
    d) Describe patterns in data.

11. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

12. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

13. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

14. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

15. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

16. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

17. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

18. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

19. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

20. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

21. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

22. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

23. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

24. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

25. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

26. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

27. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

28. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

29. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

30. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

31. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

32. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

33. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

34. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

35. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

36. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

37. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

38. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

39. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

40. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

41. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

42. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

43. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

44. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

45. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

46. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

47. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

48. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

49. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

50. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.

51. Covariational relationships are often used to:
     a) Predict future events.
     b) Explain cause-effect relationships.
     c) Test hypotheses.
     d) Describe patterns in data.
