Assignment 3

1. In order to calculate the effect of the thickness of the timer plate, the following steps must be taken:
   a. Use the given information to calculate the thickness of the timer plate.
   b. Use the calculated thickness to determine the effect on the measurement.
   c. Compare the results with the experimental data.

2. In order to calculate the effect of the thickness of the timer plate, the following steps must be taken:
   a. Use the given information to calculate the thickness of the timer plate.
   b. Use the calculated thickness to determine the effect on the measurement.
   c. Compare the results with the experimental data.

3. In order to calculate the effect of the thickness of the timer plate, the following steps must be taken:
   a. Use the given information to calculate the thickness of the timer plate.
   b. Use the calculated thickness to determine the effect on the measurement.
   c. Compare the results with the experimental data.

4. In order to calculate the effect of the thickness of the timer plate, the following steps must be taken:
   a. Use the given information to calculate the thickness of the timer plate.
   b. Use the calculated thickness to determine the effect on the measurement.
   c. Compare the results with the experimental data.

5. In order to calculate the effect of the thickness of the timer plate, the following steps must be taken:
   a. Use the given information to calculate the thickness of the timer plate.
   b. Use the calculated thickness to determine the effect on the measurement.
   c. Compare the results with the experimental data.

6. In order to calculate the effect of the thickness of the timer plate, the following steps must be taken:
   a. Use the given information to calculate the thickness of the timer plate.
   b. Use the calculated thickness to determine the effect on the measurement.
   c. Compare the results with the experimental data.

7. In order to calculate the effect of the thickness of the timer plate, the following steps must be taken:
   a. Use the given information to calculate the thickness of the timer plate.
   b. Use the calculated thickness to determine the effect on the measurement.
   c. Compare the results with the experimental data.

8. In order to calculate the effect of the thickness of the timer plate, the following steps must be taken:
   a. Use the given information to calculate the thickness of the timer plate.
   b. Use the calculated thickness to determine the effect on the measurement.
   c. Compare the results with the experimental data.

9. In order to calculate the effect of the thickness of the timer plate, the following steps must be taken:
   a. Use the given information to calculate the thickness of the timer plate.
   b. Use the calculated thickness to determine the effect on the measurement.
   c. Compare the results with the experimental data.

10. In order to calculate the effect of the thickness of the timer plate, the following steps must be taken:
    a. Use the given information to calculate the thickness of the timer plate.
    b. Use the calculated thickness to determine the effect on the measurement.
    c. Compare the results with the experimental data.
