Unit 14 - Week 12

Assignment 12

The due date for submitting this assignment has passed. **Due on 2019-04-24, 23:59 IST.**
As per our records you have not submitted this assignment.

1) **1 point**

If the available shearing resistance and the mobilized shearing resistance of any slope section are denoted by $\tau_f$ and $\tau$ respectively, the factor of safety of the slope is

(a) $\frac{\tau_f}{\tau}$
(b) $\frac{\tau}{\tau_f}$
(c) $\frac{2\tau_f}{\tau}$
(d) $\sqrt{\frac{\tau_f}{\tau}}$

No, the answer is incorrect.
Score: 0
Accepted Answers:
a

2) **1 point**

A slope of infinite extent is made up of dense sand layer. Slope is inclined to horizontal axis at an angle of 30°. Determine the factor of safety of the slope against she failure if the angle of internal friction of the soil is 35°.

(a) 1.15
(b) 1.21
(c) 1.25
(d) 1.35

No, the answer is incorrect.

a
For the trial slip circle shown in the figure with \( W = 380.0 \) kN, unit weight of soil \( \gamma = 18.8 \) kN/m\(^3\), \( \phi = 0^\circ \) and \( c = 27.0 \) kN/m\(^2\). The value of restoring moment (in kN-m) for the slope shown in the figure is

\[
\text{Moment} = \left( \frac{W}{2} \right) \times r \times \sin \theta
\]

\( r = 8.5 \) m, \( \theta = 107.0^\circ \), \( H = 7.0 \) m, \( \beta = 32^\circ \)

(a) 1245.1 (b) 2457.4 (c) 3643.0 (d) 4478.9

1 point

No, the answer is incorrect.

Accepted Answers:
A slope of 1V:2H is to be made in a silty clay having an angle of internal friction of 10° and a cohesion of 30.0 kN/m². The unit weight of soil is 18.0 kN/m³ and depth of cut is 7.0 m. The value of net normal and tangential force is 2741 kN and 914 kN, respectively. Angle between starting point, origin and exit point of the assumed slip surface is 109°. Lever arm distance between origin and exit point of the slip surface is provided as 12.12 m. The factor of safety of the slope by the Swedish circle method is

(a) 1.25  (b) 1.32  (c) 1.44  (d) 1.56

No, the answer is incorrect.
Score: 0
Accepted Answers: b

If an infinite slope of clay at a depth of 6.0 m has mobilized cohesion of 20.0 kN/m² and a unit weight of 18.0 kN/m³. The stability number is

(a) 0.05  (b) 0.10  (c) 0.15  (d) 0.19

No, the answer is incorrect.
