Assignment 1

The due date for submitting this assignment has passed. Due on 2021-02-03, 23:59 IST.

As per our records you have not submitted this assignment.

1. What is the definition of term infant mortality rate?
   - Number of infant deaths for every 1,000 births.
   - Number of infant deaths for every 1,000 live births.
   - Number of infant born for every 1,000 deaths.
   - Number of infant death for every 1,000 births.
   **No. your answer is incorrect. Score: 0**
   
   **Accepted Answer:** Number of infant deaths for every 1,000 live births

2. Select the correct coexistences from the following:
   - Carbonate alkalinity as CO2(g) + ½ H₂CO₃(aq)
   - Carbonate alkalinity as CO₂(g) + ½ H₂CO₃(aq)
   - Carbonate alkalinity as CO₃²⁻(aq)
   - Carbonate alkalinity as H₂CO₃(aq)
   **No. your answer is incorrect. Score: 0**
   
   **Accepted Answer:** Carbonate alkalinity as CO₂(g) + ½ H₂CO₃(aq)

3. In the context of the case study where germ theory was discussed. According to the germ theory discussed as a case study, what statements can be considered correct (Multiple options correct)?
   - Prior to discovery of germs, it was believed that the spread of disease was due to miasma or “bad smell in the air emanating from rotting corpses, sewage or vegetation”.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hooke.
   - Prior to discovery of germs, it was believed that the spread of disease was due to microorganisms not seen by naked eyes observed by Robert Hoo
