Assignment 7

The due date for submitting this assignment has passed. As per your records, you have not submitted the assignment.

1. Revisiting the following 10 steps of an empirical research in the proper sequence:
   1. Design of experiment
   2. Building of a model
   3. Identification of research questions
   4. Determination of variables
   5. Experiment data
   6. Inspection data
   7. Confirmatory study
   8. Predictive study
   9. Pretest study
   10. Preliminary study

   No, the answer is incorrect. Scores: 0/10

   Accepted Answer
   10

2. A normal and standardised sample size required to prepare for a full-scale study is known as

   No, the answer is incorrect. Scores: 0/10

   Accepted Answer
   Sample size

3. Given that two participants are sufficient for conducting a pilot study, whereas the number lies between _______ for a centile selection study.

   No, the answer is incorrect. Scores: 0/10

   Accepted Answer
   10 and 50

4. A participant’s performance is influenced by the experience of a repetitive task. This phenomenon is known as

   No, the answer is incorrect. Scores: 0/10

   Accepted Answer
   Learning curve

5. Suppose there are 100 tasks in an empirical study, and 50 participants. You ask the first 25 participants to complete the first 50 tasks, and next 10 participants completing the next 50 tasks.

   No, the answer is incorrect. Scores: 0/10

   Accepted Answer
   Not applicable
