Assignment 5

1. Which of the following is not true for the search tree?

2. Which of the following tree applications are true?

3. Let n be the number of elements in the tree. The time complexity of any operation in a binary tree is of order:

4. Which of the following is the right expression of the tree?

5. Which of the following is the right expression of the tree?

6. Which of the following is the right expression of the tree?

7. Which of the following is the right expression of the tree?

8. Which of the following is the right expression of the tree?

9. Which of the following is the right expression of the tree?

10. Which of the following is the right expression of the tree?

11. Which of the following is the right expression of the tree?

12. Which of the following is the right expression of the tree?

13. Which of the following is the right expression of the tree?

14. Which of the following is the right expression of the tree?

15. Which of the following is the right expression of the tree?

16. Which of the following is the right expression of the tree?

17. Which of the following is the right expression of the tree?

18. Which of the following is the right expression of the tree?

19. Which of the following is the right expression of the tree?

20. Which of the following is the right expression of the tree?

21. Which of the following is the right expression of the tree?

22. Which of the following is the right expression of the tree?

23. Which of the following is the right expression of the tree?

24. Which of the following is the right expression of the tree?

25. Which of the following is the right expression of the tree?

26. Which of the following is the right expression of the tree?

27. Which of the following is the right expression of the tree?

28. Which of the following is the right expression of the tree?

29. Which of the following is the right expression of the tree?

30. Which of the following is the right expression of the tree?
