Assignment 2

To carry out a preliminary user study for an interface usability enhancement.

1. Conduct a literature review on user interface design.

2. Identify the user groups for the study.

3. Design the user interface.

4. Conduct the preliminary usability test.

5. Analyze the results and make improvements.

6. Repeat the test until the interface is user-friendly.

7. Present the findings and recommendations.

Note: This assignment is an individual task and not a group project.
