Consider the following statements about the mailing list in the traditional networks.

1. LIST 1: This is an anonymous mailing list. People can use email software for anonymous mailing list so users can send emails without their name being the from address. This protects the users from identity theft. 
   - True
   - False

2. LIST 2: This list is moderated by a moderator. The moderator is responsible for reviewing and approving any posts before they are sent. 
   - True
   - False

3. Consider the following statements about the mailing list and email in the P2P environments.
   - Only list subscriptions should be allowed to be sent to the list.
   - List servers provide automatic replies for each new member.
   - It is possible to schedule messages to be sent to the list.
   - The list server process is not affected by any network issues.
   - All of the above statements are true.
   - None of the above statements are true.

4. Which of the following sentences is true about the Universal File System (UFS)?
   - UFS is a file system that can be accessed by multiple users at the same time.
   - UFS is a file system that is not affected by network issues.
   - All of the above statements are true.
   - None of the above statements are true.

5. The function of a P2P file-sharing protocol is to allow users to exchange files directly with each other, without the need for a central server.
   - True
   - False

6. Why are the details of a document's content maintained for the Peer-to-Peer file-sharing protocol?
   - To ensure that the document is kept up-to-date.
   - To prevent unauthorized access to the document.
   - To maintain the integrity of the document.
   - To ensure that the document is protected from malicious software.

7. E-mail is associated with a domain name. A domain name is a unique identifier that corresponds to a specific Internet host or group of hosts.
   - True
   - False

8. An anonymizing proxy server is a server that is used to hide a user's IP address when accessing the internet. These servers are often used for privacy reasons, such as to prevent webmasters from tracking a user's online activity.
   - True
   - False

9. How do search engines find web pages?
   - Search engines use automated programs called crawlers or spiders to explore the web and index web pages.
   - Search engines rely on human operators to manually submit web pages for indexing.
   - Search engines only index pages that have been explicitly submitted by website owners.
   - Search engines do not index web pages automatically.

Which of the above statements is correct?

- None of the above statements are correct.
- The correct answer is option 1.
- The correct answer is option 2.
- The correct answer is option 3.
- The correct answer is option 4.
