Assignment Details

Estimated Time: 2 hours

Assignment Instructions

1. The voltage regulator is to be designed to regulate the voltage on a 120-V single-phase line as shown in the following figure.

2. The following expressions are given for the values of the windings and their current

3. The voltage regulator is to be designed to regulate the voltage on a 120-V single-phase line as shown in the following figure.

4. The voltage regulator is to be designed to regulate the voltage on a 120-V single-phase line as shown in the following figure.

5. The voltage regulator is to be designed to regulate the voltage on a 120-V single-phase line as shown in the following figure.

6. The voltage regulator is to be designed to regulate the voltage on a 120-V single-phase line as shown in the following figure.

7. The voltage regulator is to be designed to regulate the voltage on a 120-V single-phase line as shown in the following figure.

8. The voltage regulator is to be designed to regulate the voltage on a 120-V single-phase line as shown in the following figure.
