Assignment 5

The task is to identify if this assignment has been submitted. As per our records you have not submitted this assignment.

1. An approach to grounded theory that assumes the relativism of multiple social realities is:
   a. The constructionist approach to grounded theory
   b. The structural interactional approach to grounded theory
   c. The constructivist approach to grounded theory
   d. The symbolic interactional approach to grounded theory

2. While collecting data for grounded theory research, the researcher must:
   a. Avoid forcing data into predefined categories through the imposition of artificial constructs.
   b. Avoid forcing data into predetermined categories through the imposition of artificial constructs.

3. The aim of theoretical sampling is:
   a. To fill in details.
   b. To increase the size of the original sample.

4. With reference to coding in grounded theory, an event that stands out because it has
   boundaries, intensity, and an emotional force, is termed as:
   a. A significant event
   b. A salient event
   c. A distinctive event
   d. A conditional event

5. One of the primary criticisms of participatory action research is:
   a. It lacks scientific rigor
   b. It has too much scientific rigor

6. The fact that participatory action research is intended to be emancipatory indicates that
   a. Maintains the extent to which the contextual constraints of the environment being
      studied contribute to emancipation.
   b. Maximizes the extent to which the contextual constraints of the environment being
      studied contribute to emancipation.
   c. Maximizes the extent to which the contextual constraints of the environment being
      studied contribute to emancipation.
   d. Maintains the extent to which the contextual constraints of the environment being
      studied contribute to emancipation.

7. Reflexivity in qualitative research in general and in participatory action research in
   particular, deals with:
   a. Reflexivity in the research process leading to feedback that aids the application of
      the solution.
   b. Reflexion of the researchers in response to crises situations during the research
      process.

8. In participatory action research, human action must be studied as:
   a. The overt behavior of the participants
   b. The behavior of the participants within control and as shaped by values, interests, and
      judgments of the participants.
