Submitted assignment

Questions 1-6 are based on the following case:

A chemist wishes to test the effect of four chemical agents on the strength of a particular type of cloth. Because there might be variability from one bolt to another, the chemist decides to use a randomized block design, with the bolts of cloth considered as blocks. She selects five bolts and applies all four chemicals in random order to each bolt. The resulting tensile strengths as follows (use $\alpha=0.05$)

<table>
<thead>
<tr>
<th>Bolt</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
</thead>
<tbody>

1) Mean square value of block in this experiment is

- (i) 4.32
- (ii) 1.82
- (iii) 39.25
- (iv) 12.95

No, the answer is incorrect.

**Score: 0**

**Accepted Answers:**

(iii) 39.25

2) Degree of freedom the block in this experiment is

- (i) 4
- (ii) 3
- (iii) 12
- (iv) 19

No, the answer is incorrect.

**Score: 0**

**Accepted Answers:**

(i) 4

3) Mean square value of treatment in this experiment is

- (i) 4.32
No, the answer is incorrect.
Score: 0
Accepted Answers:
(i) 4.32

4) Degree of freedom the treatment in this experiment is

- (i) 4
- (ii) 3
- (iii) 12
- (iv) 19

No, the answer is incorrect.
Score: 0
Accepted Answers:
(ii) 3

5) Mean square value of residual in this experiment is

- (i) 4.32
- (ii) 1.82
- (iii) 39.25
- (iv) 12.95

No, the answer is incorrect.
Score: 0
Accepted Answers:
(ii) 1.82

6) Degree of freedom the residual in this experiment is

- (i) 4
- (ii) 3
- (iii) 12
- (iv) 19

No, the answer is incorrect.
Score: 0
Accepted Answers:
(iii) 12

Questions 7-10 are based on the following case:

Three different washing solutions are being compared to study their effectiveness in retarding bacteria growth in five-gallon milk containers. The analysis is done in a laboratory, and only three trials can be run on any day. Because days could represent a potential source of variability, the experimenter decides to use a randomized block design. Observations are taken for four days, and the data are shown here. (use $\alpha = 0.05$)

<table>
<thead>

Accepted Answers:
(iii) 12
8) Degree of freedom the block in this experiment is

- (i) 2
- (ii) 3
- (iii) 11
- (iv) 6

No, the answer is incorrect.
Score: 0
Accepted Answers:
(ii) 3

9) Mean square value of treatment in this experiment is

- (i) 51.83
- (ii) 8.64
- (iii) 368.97
- (iv) 351.75

No, the answer is incorrect.
Score: 0
Accepted Answers:
(iv) 351.75

10) Degree of freedom the treatment in this experiment is

- (i) 2
- (ii) 3
- (iii) 11
- (iv) 6

No, the answer is incorrect.
Score: 0
Accepted Answers:
(i) 2
