Assignment 8

The site data indicate that the heating load is not as high as expected. Do you think there is a possibility for improved energy efficiency?

1. The thermocouple is close to the maximum temperature range. Is this a problem?

2. The pressure is too high in the system. What does it mean?

3. The electrical consumption is relatively high. Does it mean that the boiler is inefficient?

4. The fuel consumption is relatively high. Does it mean that the boiler is inefficient?

5. The water temperature is too high. Is it a problem?

6. The fuel consumption is relatively high. Does it mean that the boiler is inefficient?

7. The water temperature is too high. Is it a problem?

8. The fuel consumption is relatively high. Does it mean that the boiler is inefficient?

9. The water temperature is too high. Is it a problem?

10. The fuel consumption is relatively high. Does it mean that the boiler is inefficient?
