Assignment 12

For this assignment, you will select a queueing system and perform an analysis using the following tools:

- Simulation
- Mathematical analysis
- Heuristic analysis

Your assignment should include:

1. The queueing system you have selected
2. The assumptions you make about the system
3. The performance metrics you will analyze
4. The methods you will use to calculate these metrics
5. The results of your analysis
6. A discussion of the implications of your findings

Due date: [Date]

Good luck!
