Assignment 5

Due on 2019-09-04, 23:59 IST.

Week 1
1. Which of the following options is correct about 20 and 30 NaCl electrolyte? 1 point
   - [ ] Temperature of the 20 NaCl electrolyte decreases as the concentration increases up to 0.9%.
   - [ ] Temperature of the 30 NaCl electrolyte decreases as the concentration increases up to 0.9%.
   - [x] Both 20 and 30 are correct.

No. The answer is incorrect.

4. If the instability parameter is represented by the equation, \( \Theta = m^2 - 0.69 \) when \( m \) is the strain rate sensitivity. Following the above, find out, \( m \) for the unstable regime will be __________

   \[ \Theta = m^2 - 0.69 \]

   \[ 0.8 \]
   \[ 0.9 \]
   \[ 1.0 \]
   \[ 0.5 \]

No. The answer is incorrect.
