Assignment 7

1. Name the animal kingdom in which humans belong.

2. What is the process by which livestock is born?

3. Define the term "photosynthesis." How does it relate to the process of growth and development in plants?

4. Describe the process of transpiration in plants. How does it differ from respiration?

5. Explain the significance of the term "biodegradable waste." How does it affect our environment?

6. Discuss the importance of recycling in waste management. What are the benefits of recycling?

7. What is the chemical formula for water? How does it relate to the process of hydration?

8. Describe the process of evaporation. How does it differ from condensation?

9. Explain the role of microorganisms in the decomposition of organic matter. How do they contribute to the soil's fertility?

10. Discuss the importance of pollination in plant reproduction. How does it affect the economy?

11. Describe the process of seed germination. How does it differ from seedling growth?

12. Explain the significance of the term "ecosystem." How does it relate to the concept of biodiversity?

13. Discuss the importance of conservation in protecting the environment. What are the benefits of conservation?

14. Explain the role of natural resources in human society. How do they affect our economy?

15. Discuss the impact of deforestation on the environment. What are the benefits of reforestation?

16. Explain the significance of the term "sustainability." How does it relate to the concept of stewardship?

17. Discuss the importance of renewable energy sources in reducing our carbon footprint. What are the benefits of renewable energy?

18. Explain the role of climate change in shaping our environment. How does it affect our society?

19. Discuss the importance of soil conservation in maintaining soil fertility. What are the benefits of soil conservation?

20. Explain the role of the atmosphere in regulating the Earth's climate. How does it affect our weather patterns?
