Assignment 4

Due on 2021-02-11, 23:59:59 IST.

1. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

2. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

3. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

4. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

5. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

6. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

7. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

8. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

9. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

10. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

11. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

12. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

13. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

14. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

15. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

16. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

17. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

18. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

19. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

20. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

21. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

22. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

23. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

24. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

25. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

26. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

27. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

28. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

29. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

30. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

31. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

32. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.

33. (b) Consider the specific gravity of water. Show that the water level in the tank is 2.0 m deep. The diameter of the lower end of the tank is 2.0 m. The width of the tank is 1.5 m. Assume the fluid to be water.
