Background: Medical devices and in vitro diagnostics forms an important component of healthcare today. These products are not drugs but play an important role in either individually or in conjunction with drugs in patient care.

Clinical Development Service Agency (CDSA) is being involved in organising and conducting GCP (Good Clinical Practice) and regulatory workshops all over the country since 2012 to educate the stakeholders and apprise them about recent drugs & cosmetics Rule amendment.

This online course “Regulatory requirements for medical devices and IVDs in India” is designed for manufacturers, applicants for manufacturing and import license of devices, pharmacists and other healthcare professionals involved in design, development, manufacture of medical devices, IVDs, etc. These lectures are designed in such a way that it can give an insight into the topic for even lay people. Lectures in this course are delivered by former and current Central Drugs Standard Control Organisation (CDSCO) (Regulators) Officers to explore the scientific, regulatory and ethical aspects of medical devices. The series of lectures deals and describes in easy language different aspects related to manufacturing requirements, standards, classification, licensing, technical and other manpower related aspects. In brief, this course attempts to give an overview of all the regulatory requirements in the area of medical devices and IVDs in India.
