Electromagnetic Fields - Video course

Electrostatics 16

1 Scalar and Vector fields 2  
2 Coulomb’s Law and concept of Electric Field 2  
3 Divergence, the Divergence Theorem and Gauss’ Law 2  
4 Concept of Electrostatic Potential, Poisson’s Equation 2  
5 Energy in the Field, Capacitance 2  
6 capacitance of common two-plate capacitors, including two-wire capacitors 2  
7 Dielectrics, dielectric boundary conditions 2  
8 Solution of Laplace’s Equation and Poisson’s Equation in 1-D. Capacitance  
   calculations with multiple dielectrics 2

Magnetostatics 12

9 Force due to a Magnetic field, Force due to combined Electric and Magnetic fields 2  
10 Biot-Savart Law, calculation of Magnetic Field for simple coil configurations 2

Topic Lectures

11 Ampere’s Law 1  
12 Magnetic flux, Stokes theorem 2  
13 Magnetic materials, magnetic boundary conditions 2  
14 Inductance calculations from phi=L*I, for common geometries 2  
15 Force on a dipole 1

Slowly Time-Varying Systems 5

16 Frames of reference and motional emf. Faraday’s law 2  
17 Stored energy in the magnetic field. The Inductance equation 2  
18 Examples from electric machines and transformers 1

Time-Varying Fields 13

19 The Displacement current. Maxwell’s Equation 2  
20 The wave equation in 1-Dimension 1  
21 Solution of the wave equation. Plane waves 2  
22 Wave propagation in vacuum and lossy dielectrics 2  
23 Skin depth and frequency dependence of lumped elements 2  
24 Energy transport by waves. The Poynting vector 2  
25 Reflection at boundaries. Normal incidence formula. Impedence matching. 2
