PRE-REQUISITES: We try to make this self-contained. However, some familiarity with the basic mathematical tools used in say, the first courses on Mechanics, Electromagnetism, would help.

INDUSTRIES APPLICABLE TO: Quantitative Finance and Scientific consulting companies

COURSE OUTLINE:
This would be the second of a two-part series on Mathematical Methods in Physics. The aim here is to provide a solid mathematical foundation for the budding Physicist eager to climb the ladder of self-learning. This course is designed to cater to an undergraduate student who excitedly embarks on a study of Physics, but is obstructed by the mathematics which appears so forbidding. The approach we will follow is one of showing many examples, and weaving the theory around examples. When possible, we will show how Mathematica can be used to offer extra insight.

ABOUT INSTRUCTOR:
Auditya Sharma: Got a B.Tech in Engineering Physics from IIT Madras in 2006, followed by a PhD in Physics with specialization in Statistical Physics from the University of California at Santa Cruz in 2011.

COURSE PLAN:
Week 1: Complex Analysis 1
Week 2: Complex Analysis 2
Week 3: Complex Analysis 3
Week 4: Complex Analysis 4
Week 5: Partial Differential Equations 1
Week 6: Partial Differential Equations 2
Week 7: Orthogonal Polynomials 1
Week 8: Orthogonal Polynomials 2
