where I indicates impossible rule

The contradictory rules are:
(a) YYYY, NYYY, NNYY
(b) YYYN, NYYN, NNYN
(c) YYYY, YYYN, NNYN
(d) There are no contradictory rules

6.4.9 In “test 4” the contradictory actions are:
(a) A1, A3
(b) A1, A2
(c) A2, A3
(d) A2, I

6.4.10 In “test 4” missing rule is:
(a) NYNN
(b) NYYN
(c) YYNN
(d) YNYN

6.4.11 If in “test 4” the rules where the contradictory actions or unspecified actions are present, the action is replaced by A2 only, the reduced decision table using impossible rules also for reduction is:

6.5.1 Decision Trees are preferred when
a) Too many conditions need to be tested
b) Sequencing of testing conditions is important
c) When there are many loops to be performed
d) When too many actions are to be taken

6.5.2 Decision Tables are preferred when
a) Too many conditions need to be tested
b) Sequencing of testing conditions is important
c) When there are many loops to be performed
d) When too many actions are to be taken
6.5.3 **Structured English is preferred when**
   a) Too many conditions need to be tested
   b) Sequencing of testing conditions is important
   c) When there are many loops to be performed
   d) When too many actions are to be taken

6.5.4 **The objective of using decision trees is to**
   a) Expand a DFD so that a user can understand it
   b) To specify sequence of conditions to be tested and actions to be taken
   c) Describe a computational procedure that can be easily understood by a person
   c) Use it as a tool in decision support system

6.5.5 **Decision trees are superior to decision tables when**
   a) The number of conditions to be tested is very large
   b) When sequence of testing conditions is not particularly important
   c) When sequence of testing conditions is not particularly important
   c) When a large number of actions are to be specified

6.5.6 **Logical correctness of a specifications can be systematically checked by**
   a) Using decision trees
   b) Using structured English
   c) Using DFD’s
   d) Using decision tables

6.5.7 **The decision tree equivalent of the following structured English is**

```
if C2 then
    if C1
        then A3
        else A2
    endif
    else A1, A3
endif
```

6.5.8 Decision tables are better than Decision trees when
a) Conditions are to be isolated from actions in a word statement
b) Condition sequences are to be found from a word statement
c) Logical correctness of a word statement is to be established
d) Large number of actions is to be performed
6.5.9 The decision table equivalent of the Decision tree of choice (a) of 6.5.7 is
