Motivation

- The Information system designed for an organization must meet the requirements of the end users of the organization.
- To obtain what an end user expects from the Information System the designer must gain complete knowledge of the organization’s working.
- It is important for the student to know the information gathering techniques so that no information is overlooked and the nature and functions of an organization are clearly understood.
- The main purpose of gathering information is to determine the information requirements of an organization.
- Information requirements are often not stated precisely by management.
- Analyst’s responsibility to prepare a precise Systems Requirement Specifications understood (SRS) by users.
- SRS document is a vital document before starting a project.
